

SC 557 Signals

York County, SC

RKA Services

- Traffic Signal Design
- Construction Administration
- SCDOT Coordination

As a subconsultant, RKA provided design phase services for two new traffic signals along SC 557 using wood poles. Our approach will be to conduct an on-site review to verify all existing conditions and locate any possible conflicts in comparison to the roadway widening plans. It also requires the removal of one existing signalized intersection at SC 557 at Ridge Road in York County, SC. Depending on traffic shifts and construction scheduling, there is a possibility of additional temporary signal designs. Additional services will also include attendance at meetings, construction administration services, and as-built. These plans will be submitted to SCDOT for their review. All work will be done in Microstation V8 and will follow SCDOT standards and guidelines.
